

YZV 447E TERM PROJECT REPORT

Fall 2025

Report 3: Data Collection

Team Name: Axion

Summary

Versions of the experiment: We developed 2 versions of the experiment

1. Trial duration: Fixed at 1000 ms. When we tested this version, we had many missed trials because the time window was too short for participants to process cropped faces and respond accurately.
2. Trial duration: Wait until response is made. This was our final version. Participants could take as much time as needed, which resulted in higher accuracy and more reliable RT measurements. No trials were missed.

Stimulus updates: We cropped all KDEF face images to oval/rectangular shapes to remove hair and ear cues. This modification forced participants to rely on internal facial features for gender decisions. We used 120 stimuli total: 60 female faces (IDs 15-35, excluding 28) and 60 male faces (IDs 01-20), with each identity shown in three emotional expressions (Happy, Angry, Neutral).

Data collection location: Remote (team members' personal computers)

Subject Demographics

Personal information about the age, gender, education, and handedness of the subjects who participated in our experiment is summarized below.

Gender	Number of Subjects	Mean Age (std dev)	Mean Education Years (std dev)
Male	3	28.67 (18.90)	13.33 (3.79)
Female	4	27.50 (10.34)	15.00 (2.00)

Output Data

This section summarizes the output files from our experiment. All participants completed 120 trials (40 per emotion condition) with no missed responses.
